

Add Certainty to Your Data Center

NetShelter Rack PDU Advanced

Our evolving IT landscape continually requires new types of equipment and applications, more capacity, and constant connectivity.

The main challenges:

It's hard to deploy
IT equipment fast enough.

Power density requirements
keep increasing.

Downtime is
unacceptable.

Plan for an always-changing future

Power distribution adds a layer of complexity to IT deployments. Because every device needs the right amount of power and the right type of outlet, adding or upgrading PDUs (or finding out you have the wrong type) slows down deployment and can create unexpected costs.

Choose a rack power distribution unit (PDU) that helps you keep up—and be prepared for the future.

One outlet design for all applications

APC NetShelter™ Rack PDU Advanced simplifies and speeds up IT deployments. Use the same PDU for every type of device, and keep up with increasing power needs.

Industry-first 4-in-1 combination outlet design

Acts as any of these outlet types

These trends don't show any signs of slowing.

Not enough outlets for current and future equipment

Up to 48 outlets on each PDU, so you have room to grow

Outlet type must match equipment

4-in-1 outlet combo means you can use the same PDU for almost any IT deployment

Power density requirements keep growing

Handles high-density needs, up to 34.6 kW per PDU

More power required in each rack

Slim design allows you to fit multiple PDUs in one rack

Long wait times for customized PDUs

US-based manufacturing means faster delivery

Custom colors and other options available!
